DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless – (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Bacon (5,480,107). Bacon teaches a twin-engine aircraft configuration, comprising: an airframe having a centerline along its longitudinal axis (fig. 4); a first jet engine (12) and second jet engine (14) both mounted within a plane vertical to the centerline (col. 6, lines 13-15); each of the first and second jet engines having a thrust adequate to takeoff, climb, cruise and land the aircraft at full gross weight without use of the other engine (col. 6, lines 44-49); one of the first and second jet engines having a maximum thrust greater than the maximum thrust of the other of the first and second engines (col. 6, lines 49-50), where the thrust differential created by a different power setting on one of two otherwise equally powered engines (col. 6, lines 49-56). Bacon further teaches a method of operating the aircraft comprising the steps of: providing a first jet engine having a thrust adequate to takeoff, climb, cruise and land the aircraft at full gross weight, and providing a second jet engine having thrust greater than the thrust of the first jet engine, whereby each of the first and second jet engines is a “main” engine; during take-off and climb, running the first jet engine and running the second jet engine;

during ordinary operational cruise, running one of the first and second jet engine and reducing the power of the other engine (col. 7, lines 47-67).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Binden (4,711,415) teaches a twin-engine aircraft having a centerline along its longitudinal axis and a first and second jet engines mounted within a plane vertical to the centerline (fig. 5).
